

RADIX POWER SOLUTIONS PVT. LTD.

Website Redesign, Complete Ideation Brief

Reference site: www.radixbattery.com

1. Project Objective

Radix Power Solutions Pvt. Ltd. has 25 years of manufacturing history, 150+ employees, a 650+ distributor network, 10 lakh+ customers, exports to 5+ countries, and a new lithium battery line, but the current website does not reflect that scale or credibility. The goal of this redesign is to bring the website to a level that matches (and helps grow) the business: a fast, modern, trustworthy site that converts visitors, distributors, B2B buyers, export partners, and retail customers, into enquiries.

This brief is meant to give the design company full context so the first draft is as close to final as possible, reducing rounds of correction.

2. Goals for the New Website

- Present Radix as a large, established, quality-certified manufacturer, not a small local vendor.
- Make it effortless for three distinct audiences to find what they need: (a) retail/end customers looking for a battery, (b) prospective distributors/dealers, (c) export/B2B buyers.
- Increase qualified enquiries via clear CTAs, WhatsApp integration, and simplified forms.
- Be fast and fully usable on mobile, most visitors will be on phones.
- Be easy for the Radix team to update (new products, blog posts, career openings) without needing a developer every time.
- Fix content inconsistencies currently on the site (see Section 6).

3. Target Audiences

- **Retail / End Consumers:** Homeowners and vehicle owners looking for inverter, automotive, bike or solar batteries. Need: trust, warranty clarity, nearest dealer.
- **E-Rickshaw & Fleet Operators:** Commercial buyers focused on total cost of ownership, charging speed, and durability, a fast-growing segment given the new lithium line.
- **Distributors / Dealers (prospective):** Evaluating Radix as a brand to partner with. Need: scale proof, margins/support info, easy application process.
- **Export / International B2B Buyers:** Need: certifications, product specs/datasheets, MOQ, logistics capability, easy way to request a quote.

4. Sitemap & Page-by-Page Content Plan

Page	Key Content & Features
Home	Hero with rotating product-line highlights (skip the stock carousel; use motion-graphics or a video loop instead), quick-select "Find Your Battery" tool, trust bar (25 yrs / 650+ distributors / 10L+ customers / export countries), category tiles, why-Radix section, testimonials with names, latest blog posts, CTA strip.

About Us	One clean narrative (fix duplicate/contradicting copy; pick one team-size figure), founder story with photo, timeline/milestones graphic (2001 to 2025 lithium launch), leadership team with real photos & bios, certifications & awards, manufacturing philosophy.
Products (hub)	Grid of 8 lines (Inverter, Automotive, Solar Batteries, Solar Power Generating Systems, E-Rickshaw, Bike, E-Rickshaw Lithium, Inverter Lithium) each with image, one-line pitch, and link to dedicated page.
Product detail pages (x8)	Hero image, key specs table (capacity, warranty, dimensions, weight), model/variant list with downloadable datasheet PDF, use-case description, FAQs, "Enquire Now" form pre-filled with product name. Solar Power Generating System page should present panel + battery + solar inverter + charge controller as one bundled solution, with each component also explained (specs, capacity/wattage, warranty).
Infrastructure	Photo/video gallery of factory floor, machinery, QC lab; process flow diagram (raw material → assembly → testing → dispatch); capacity figures; quality certifications (ISO/BIS) with certificate images.
Export	Interactive world map highlighting served countries (Nigeria, UAE, Afghanistan, Nepal, etc.), per-region blurb, export process/logistics overview, distributor/partner enquiry form.
Career	Open positions list (or "send your CV" if no live postings), culture photos, employee testimonials, benefits overview.
Blog	Card grid, filterable by category (Maintenance Tips, Industry News, Sustainability, Company Updates), author + date, related-post suggestions.
Dealer / Distributor Locator	New page: a searchable/map-based locator by city/state so retail and B2B buyers can find nearest dealer (650+ distributor network is a major trust asset, currently invisible on site).
Contact Us	Map embed, toll-free + WhatsApp click-to-chat, regional office addresses, quick enquiry form with product dropdown, response-time promise.

5. Visual & Brand Design Direction

5.1 Overall feel

Industrial-premium, not generic-corporate: confident, engineered, and energetic, closer to "precision power" than a stock-photo template. It's worth studying Amara Raja Batteries, Exide Industries, and international players like EnerSys or Trojan Battery for tone, not to copy them, but to see what "world-class industrial" looks like in layout discipline and photography quality.

5.2 Colour & typography

- Primary palette: deep navy/charcoal + a strong accent (amber/red/electric-blue works well for "power/energy" cues), keep it to 2 primary + 1 accent colour, used consistently.
- Typography: one strong sans-serif for headings (bold, geometric, conveys engineering precision), one highly readable sans-serif for body text. Avoid more than 2 font families.
- Consistent iconography style (line icons, not mismatched clipart) for specs, features, and process steps.

5.3 Photography & imagery

- Replace stock-feeling banner images with real photography: factory floor, real products on white background, real team/leadership, real dealer/distributor moments if available.
- Product shots should be professionally lit on a clean background, consistent across all 8 product lines.
- Short factory walkthrough video for the homepage/Infrastructure page adds major credibility, even a 60-90 second clip.

5.4 Layout patterns to avoid / adopt

- Avoid: auto-rotating image carousels as the main hero (poor engagement, bad for SEO, easy to skip).
- Avoid: walls of unstructured paragraph text, break into scannable sections with headings, icons, and short stats.
- Adopt: sticky/simplified navigation, generous white space, a persistent "Enquire Now" / WhatsApp button, and a clear visual hierarchy per page (one primary message + supporting content).

6. Content Fixes Needed From Current Site

These should be corrected as part of the rewrite, not carried over:

- About Us currently states two different team sizes (150+ and 350+ in different places) and repeats the same paragraph twice, needs one clean, single narrative.
- Meta descriptions/titles are keyword-stuffed (e.g. repeating "battery manufacturer" excessively), rewrite naturally per page for current SEO best practice.
- Several URLs use query strings (e.g. ?row=31) instead of clean, descriptive URLs, should be restructured (e.g. /products/solar-batteries).
- Distributor network (650+) and customer base (10L+) are strong trust signals currently buried in text, should be pulled out as headline stats with icons on the homepage.
- No visible certifications (ISO/BIS), case studies, or named testimonials, all should be sourced and added.
- Complete Solar Power Generating Systems (solar panel, solar battery, solar inverter, and solar charge controller) are currently not shown anywhere on the site, only the solar battery is mentioned. This is a full solution and a higher-value sale, and needs its own dedicated product line, page, and visibility on the homepage.

7. Technical & Functional Requirements

Area	Requirement
Speed & hosting	Target <2.5s load (Core Web Vitals); modern hosting/CDN (Cloudflare or similar); image compression + lazy loading.
Mobile-first build	60-70% of Indian B2B/B2C traffic is mobile, so design mobile layouts first rather than as an afterthought.
CMS	WordPress (with a page builder like Elementor) or a headless setup, so your team can update blog, products, and career postings without depending on the developer for every change.
SEO foundation	Fix keyword-stuffed meta descriptions; unique title/meta per page; schema.org markup (Organization, Product, LocalBusiness); clean URLs (no query strings like ?row=31); XML sitemap; alt text on all images.
Lead capture	WhatsApp Business click-to-chat button (very high conversion in Indian B2B); enquiry forms routed to CRM or email with instant auto-acknowledgement; call-back request widget.
Analytics	Google Analytics 4 + Google Search Console + call-tracking on the toll-free number to measure which pages actually drive enquiries.
Accessibility	Proper contrast ratios, alt text, keyboard navigation, also helps SEO.
Security	SSL (should already be present, but verify), regular backups, spam-protected forms (reCAPTCHA).

8. Nice-to-Have Enhancements (Phase 2)

- Battery selector/finder tool ("Select your vehicle/inverter model → see compatible battery").
- Warranty registration / e-warranty card lookup online.
- Dealer/distributor portal login for order tracking (longer-term).
- Multi-language support (Hindi + English at minimum, given UP customer base; add languages for export markets if needed).
- Live chat / chatbot for instant product queries.

9. What We Need From the Design Company

- A homepage + 2 key inner-page (Product detail + About) design concept first, before full site build, for faster review cycles.
- Mobile and desktop views for every concept.
- A style guide (colours, type, spacing, component library) delivered alongside the design so it stays consistent as pages scale.
- Estimated timeline and milestones for design → development → content population → testing → launch.

10. Notes for Any Company Detail Requests

For factual company details (founding year, team size, certifications, product specs, distributor numbers, export countries, leadership names, etc.), the design company should refer to www.radixbattery.com and current company documentation as the source of truth, and confirm final figures with Radix directly before publishing, since some numbers on the current site are inconsistent (see Section 6).

11. Updated Company Inputs Required (Important)

Radix's factory infrastructure, team, products, and product designs have all changed recently. The current website reflects the old state of the company, so before the design company builds any page, Radix needs to supply fresh inputs in each of these areas; otherwise the new site will launch with outdated information again.

11.1 Factory & Infrastructure

- New/updated machinery, production lines, or capacity expansion details.
- Fresh photos and a short video walkthrough of the current factory floor and QC lab.
- Any new certifications, licenses, or quality accreditations received.
- Updated production capacity figures (units/month, etc.).

11.2 Team

- Current, single, correct headcount figure (resolve the 150+ / 350+ discrepancy on the existing site).
- Updated organisation/leadership structure, any new leadership hires or role changes.
- Fresh individual/team photos (current site photos may be outdated).
- Updated bios for leadership shown on the About page.

11.3 Products

- Full current product list, flag any models discontinued and any new models/SKUs launched since the last update.
- Updated specifications for every active model (capacity, warranty, dimensions, weight).
- Current pricing/positioning notes if relevant (even if not shown publicly, helps the design company prioritise which products get the most page real estate).
- Status update on the Lithium Inverter and Lithium Automotive lines mentioned as "in progress" on the current site, are they launched now?
- Full specs, capacity/wattage options, and warranty terms for the Solar Power Generating System components: solar panel, solar battery, solar inverter, and solar charge controller, so this can be built out as its own product line.

11.4 Product Design / Packaging

- New product casing, labelling, or packaging design files, final artwork or high-res photos of the updated design.
- Updated brand marks/logos used on new products, if changed.
- Fresh professional photography of every current product on a clean background (needed for both the product hub and detail pages in Section 4).

11.5 Anything Else Changed

- Any change in distributor count, customer count, or export country list since the figures currently on the site (650+ distributors, 10L+ customers, Nigeria/UAE/Afghanistan/Nepal).
- Any new awards, partnerships, or media coverage worth featuring.
